## How to Update Your Security Device (HASP) for Operation with New Software Releases

Since 1<sup>st</sup> quarter of 2007 we give our users opportunity to download current updates of **WinSteel, WinAlloy, WinPlant. BLACK** and **WinPlant. RED** software from our web site within bounds of our **Annual Support Service**.

To provide this opportunity we have launched new coding of Security Devices (HASPs) since 1<sup>st</sup> quarter of 2007. So before your work with the new software releases you have to update memory of your HASP.

To update the HASP memory please do the following:

1. Be sure that the HASP is connected to your PC.
2. Download from our web-site the **HASPUdate** utility:  
<http://www.metaldata.info/download/haspupdate/haspupdateen.exe>.
3. Run the **HASPUdate** utility on your PC.
4. There is unique ID of your HASP in the window header of the **HASPUdate**. Please copy it.
5. Download your security file with unique update codes for your HASP. Your security file you'll find on  
<http://www.metaldata.info/download/update/codes/xxxxxxxxxx.upd>, where **xxxxxxxxxx** is unique ID of your HASP.
6. In the window of the **HASPUdate** utility click the **From a file Radio Button**. You'll find name of your security file under this string.
7. Click the **Search** button at the right and highlight the security file name in the directory, to which you have downloaded it.
8. Click the **Open** button.
9. To update your HASP memory click the **Update** button at the bottom.
10. If all is Ok the **Operation is completed** message will be appeared. Then you can download and install new software releases.

**Please notice that you can't update your HASP memory successfully if your support period is over.**
